Paper A

Dear Dr. Author,

Reviewers have now commented on your paper. You will see that they are advising that you revise your manuscript. If you are prepared to undertake the work required, I would be pleased to reconsider my decision.

Yours sincerely,
The Editor

Comments from the Editor and Reviewers:

Associate Editor:
The reviewers raise concerns about the experimental comparison. Please address all comments carefully in a point-by-point response.

Reviewer #1: This paper studies a placeholder problem with Method M.

Major comments:
1. The authors should compare against Baseline X on Dataset D. Without this comparison the central claim in Section 4 regarding generalization performance is not sufficiently supported by the presented experimental evaluation.
2. The proof of Theorem 1 relies on Assumption A, which is not justified anywhere in the manuscript.

Minor comments:
1. Page 3, line 12: typo "teh".
2. The caption of Figure 2 is unclear.

Reviewer #2: I enjoyed reading this paper. The results are impressive. However, the related work section misses recent studies on Line of Work Z, which are highly relevant to the proposed methodology and its theoretical underpinnings. Moreover, it would be helpful to discuss the computational cost of Method M compared with existing approaches. Thank you for the opportunity to review this work.
